Cardiopulmonary resuscitation (CPR) is a collection of interventions performed to provide oxygenation and circulation to the body during cardiac arrest. Our current modern-day approach to this process stemmed from the work of a handful of doctors in the 1950s and has now evolved into the process that will be discussed further here. The most widely accepted guidelines in North America are those ...

3 December 2021. COVID-19 Vaccination Statement - implications for resuscitation and first aid training. The Australian Resuscitation Council firmly believes that vaccination is a critical part of Australia's response to the COVID-19 pandemic.

Welcome to the Australian Resuscitation Council (ARC)

Overall outcomes from out-of-hospital cardiac arrest (OHCA), both in terms of survival and neurologic and functional ability, are poor: only 11 percent of patients treated by emergency medical services (EMS) personnel survive to discharge (Daya et al., 2015; Vellano et al., 2015). Although a few EMS systems have demonstrated the ability to significantly increase survival rates (Nichol et al ...
