Environmental information plays an important role in deep reinforcement learning (DRL). However, many algorithms do not pay much attention to environmental information. In multi-agent reinforcement learning decision-making, because agents need to make decisions combined with the information of other agents in the environment, this makes the environmental information more important.

Biological Sciences

Operant conditioning, sometimes called instrumental learning, was first extensively studied by Edward L. Thorndike (1874-1949), who observed the behavior of cats trying to escape from home-made puzzle boxes. A cat could escape from the box by a simple response such as pulling a cord or pushing a pole, but when first constrained, the cats took a long time to get out.

Operant conditioning - Wikipedia

Whatever your discipline of study, this book has some degree of relevance, considering as it does human biology. I wish to convey that this book is aspirational for everyone, even the author himself. He readily admits to gaps in his/our knowledge about human biology, but he tries, in this mighty interdisciplinary work synthesizing a lifetime of ...
