In physics, a free surface is the surface of a fluid that is subject to zero parallel shear stress, such as the interface between two homogeneous fluids. An example two such homogeneous fluids is the liquid water and the air in the Earth's atmosphere. Unlike liquids, gases cannot form a free surface on their own.

Difference Between Density and Relative Density Bodies of same volumes that are made up of different suspensions have different masses. Mass and volume determine the physical size, which is called density, and is characteristic of each substance. The ratio of mass and volume is a constant size called density. Relative density is the ratio of the density of that substance to [...]
