Non-transformer-isolated Switching Power Supply Topology [SMPS]: The non-transformer-isolated type of smps are easy to understand. They are used when some external component provides the DC isolation or protection in place of the switching supply. These external components are usually 50-60Hz transformers or isolated bulk power supplies.

Amazon.com: Customer reviews: Switching Power Supplies A - Z
Switching power supplies gained popularity over the past 40 years because of their high efficiency (> 80%) and small footprint. Basically, switching power supplies take the incoming ac voltage and turn it into a high-frequency 20- to 500-kHz ac voltage that is then stepped down to a lower voltage using a small transformer.
