The simplest way to find outliers in your data is to look directly at the data table or worksheet – the dataset, as data scientists call it. The case of the following table clearly exemplifies a typing error, that is, input of the data. The field of the individual's age Antony Smith certainly does not represent the

Outliers in Your Data
- Statistics By Jim**

In most of the cases a threshold of 3 or -3 is used i.e if the Z-score value is greater than or less than 3 or -3 respectively, that data point will be identified as outliers. We will use Z-score function defined in scipy library to detect the outliers.

```
from scipy import stats.
```

Ways to Detect and Remove the Outliers | by Natasha Sharma

...

If you determine that an outlier value is an error, correct the value when possible. That can involve fixing the typo or possibly remeasuring the item or person. If that's not possible, you must delete the data point because you know it's an incorrect value.
