environment in which they grow.

Microbes and the World | Boundless Microbiology

Bacteria play an important part in our digestive system, and are our main source of beneficial vitamins and amino acids. Some bacteria also provide nitrogen for plants to help them grow well in soil, or cycle important gasses such as carbon and sulfur. They can be found all over the earth, deep down in the ocean floor and high up on Mount Everest.

Bacteria's Role in the World: A Study Guide - BrightHub ...

WORLD-BUILDING BACTERIA Earth has been a bacterial world for at least the last 3.5 billion years. In the oceans of our young planet, bacteria were among the first forms of life to emerge. Long before plants or animals had evolved, bacterial colonies flourished and grew.

Museum of Natural History

Millions of bacteria fill the guts of humans and other animals, as well as cover the surface of plant roots. Bacteria have been found in the deepest parts of the ocean, seven miles under the surface and as high as 40 miles into the atmosphere. Many species of bacteria can withstand harsh conditions, including extreme heat, cold and saline.

How Many Bacteria Live on Earth? | Sciencing

PUNE: Maharashtra's Buldhana district turned pink due to a large presence of the salt-loving 'Haloarchaea' microbes, a probe carried out by a Pune-based institute has concluded. Haloarchaea or halophilic archaea is a bacteria culture which produces pink pigment and is found in water saturated with salt, Agharkar Research Institute Director Dr Prashant Dhakephalkar told PTI.
