books from the Internet Archive and lists them in the open library. Being an open source project the library catalog is editable helping to create a web page for any book published till date. From here you can download books for free and even contribute or correct. The website gives you access to over 1 million free e-Books and the ability to search using subject, title and author.

Tropical Trees Forests Architectural Analysis

Tropical forests disappear rapidly through deforestation but also have the potential to regrow naturally through a process called secondary succession. To advance successional theory, it is essential to understand how these secondary forests and their assembly vary across broad spatial scales. We do so by synthesizing continental-scale patterns in succession using a functional trait approach.

Functional recovery of secondary tropical forests | PNAS

Forest soil carbon (C) storage plays a central role in sequestering atmospheric CO₂ on timescales from centuries to millennia. However, our current understanding of soil C sequestration in response to N deposition mainly focuses on mid-to-high latitudes in the Northern Hemisphere, where N supply typically constrains forest growth. We lack data about changes in soil C stocks in tropical ...

Nitrogen deposition accelerates soil carbon sequestration

Pine trees are evergreen, coniferous resinous trees (or, rarely, shrubs) growing 3–80 m (10–260 ft) tall, with the majority of species reaching 15–45 m (50–150 ft) tall. The smallest are Siberian dwarf pine and Potosi pinyon, and the tallest is an 81.79 m (268.35 ft) tall ponderosa pine located in southern Oregon's Rogue River-Siskiyou National Forest.

Pine - Wikipedia

Tropical forests, in contrast, have few if any coniferous trees; only forests at higher elevations and/or located closer to subtropical zones have coniferous trees. Tropical canopies are often (but not always) replete with vines and epiphytes, tree holes, and tank bromeliads, and there are soil mats among the roots of orchids, bromeliads, and ...

Temperate Forest - an overview | ScienceDirect Topics

Different species grow at different rates. Examples of the fast growing trees are *Trema micrantha*, which is used for site amelioration of deforested land and can reach 20 m after seven years , Royal Empress Trees, eucalyptus (three m per year), and willow and poplar. The studies on the possible maximum height of trees consider various issues like hydraulic requirements , or limited leaf ...

An oak is a tree or shrub in the genus *Quercus* (/ ' k w ɜ: r k ə s /; Latin "oak tree") of the beech family, Fagaceae. There are approximately 500 extant species of oaks. The common name "oak" also appears in the names of species in related genera, notably *Lithocarpus* (stone oaks), as well as in those of unrelated species such as *Grevillea robusta* (silky oaks) and the Casuarinaceae (she-oaks).

The Biosphere 2 Tropical Rainforest (figs. S1 to S3) is an enclosed experimental ecosystem where interactions among individual ecosystem components in response to environmental changes can be mechanistically studied [e.g., (20, 21)]. As part of the Biosphere 2 Water Atmosphere and Life Dynamics (B2WALD) campaign (fig. S4), we imposed a 9.5-week drought on this system to determine the mechanisms ...
