Unit 4 Ecosystems Background Learner

Unit 4 Ecosystems Background.
Introduction. The abundance of a species and species diversity affect how natural resources are processed within an ecosystem. This pattern of processing contributes to functional and compositional characteristics of an ecosystem. But many ecosystems around the world are currently experiencing significant changes in species composition, abundance, and diversity due to the influence of human activity.

(for more details, see Unit 3, "Oceans").
The distribution of temperature, light,
and nutrients set broad conditions for
life in aquatic biomes in much the same
way that climate and soils do for land
biomes. Marine and freshwater biomes
change daily or seasonally. For example,
in the intertidal zone where

Unit 4 : Ecosystems - Learner

Unit 4 // Section 4. Along with energy,
water and several other chemical
elements cycle through ecosystems and
influence the rates at which organisms
grow and reproduce. About 10 major
nutrients and six trace nutrients are
essential to all animals and plants, while
others play important roles for selected
species (footnote 3).
